FULL-STACK DEVELOPER

ABOUT ME: Full-stack developer specializing in **high-frequency trading** and **market-making systems**. I design and operate exchange integrations (CLOB and AMM), strategy engines and production infrastructure for long-running trading bots. Strong in **TypeScript** and **Python**, I focus on reliable automation, clear observability and maintainable code that supports both research (backtesting) and live trading.

EDUCATION AND PERSONAL DEVELOPMENT

- Information Systems | UFVJM – Diamantina, MG | 2014 – (incomplete)

- [Hudson | Personal Portfolio](#)

- English Fluent | [Official EF SET Certificate](#) | [Hudson Ferraz](#)

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Funttastic Company

2024 - current

Contributed to high-frequency trading and market-making platforms, integrating exchanges, liquidity provisioning algorithms, observability and distributed infrastructure across multiple blockchains.

- **Hummingbot Open-Source Contribution:**

Built custom exchange connectors, improving multi-exchange communication (CLOB and AMM) and strengthening reliability for distributed trading systems and microservices architectures.

- **Rujira Blockchain HFT Bot:**

Architected and developed a complete HFT bot for Rujira Trade (FIN), including pure market-making strategies with adaptive spread/skew engines, full integration with Rujira GraphQL and Cosmos SDK, secure wallet management (mnemonics and private keys), technical indicators, and real-time P&L monitoring.

- **“Barracuda” HFT Platform:**

TypeScript/Bun system for automated market making and liquidity management strategy factory, exchange adapters (Raydium, Rujira, CCXT), phased replace/safety logic for CLMM positions, structured logging to per-level files and Telegram integration for alerts and remote status. Deployed for long-running validation on dedicated server infrastructure.
